

Introduction to Triggers

A **trigger** invokes your azure function.

function.json

```
// function.json
{
  "scriptFile": "__init__.py",
  "bindings": [
    {
      "name": "req",
      "direction": "in",
      "type": "httpTrigger",
      "authLevel": "anonymous",
      "route": "items/{id}"
    },
    {
      "name": "obj",
      "direction": "in",
      "type": "blob",
      "path": "samples/{id}",
      "connection": "AzureWebJobsStorage"
    }
  ]
}
```
